

## Parameter-setting steps

### First start-up :

Here are a few recommendations to help you get the most out of your initial commissioning :

Switch on the device which will be the «Control unit» first. White flashing means that the device is waiting to become a «Central unit», or that it is going to connect to a nearby «Central unit». So press the button to define the device as «Central».

Then switch on the other devices, which will connect to the «Central» device automatically, in a few seconds. They stop flashing white when the connection phase is complete.

Use the Vigipool application to connect via Bluetooth to the «Control unit» device that appears when the application is launched.

Carry out the initial pairing: Security for the first Bluetooth connection.

## VIGIPOOL CONFIGURATION STEPS :

### 1. First Bluetooth pairing with the «Central» device in the Pump Room.

A safety feature requires you to bring your smartphone close to the box or press the button on the device directly the first time a smartphone is paired with Bluetooth.

### 2. WiFi configuration

This step will connect the technical room to the Internet. To do this, you need to be connected to the «Central» device via Bluetooth.

You need to enter the network SSID/password or press WPS on the Box, or add a Lynx VP.

### 3. Creating a Vigipool account

Now it's time to create a Vigipool account so you can connect to your Vigipool ecosystem, even remotely. To do this, you need to be connected to the «Central» device via Bluetooth.

To do this, you need to enter your e-mail address and a password. You will then receive an email confirming your registration.

#### 4. Sharing your pool with a professional

To give a professional access to information about your pool, you need to fill in a number of details beforehand :

Reconnaissez les caractéristiques de votre piscine afin de nous permettre d'optimiser le fonctionnement des appareils installés.

**Ma piscine**

Nom de la piscine  
Adresse postale

Volume (m<sup>3</sup>)  
litres
